

## Block Cylinders

for stroke end control  
 double acting, max. operating pressure 500 bar

### Fixing possibilities

Cylinders must be backed up for operating pressures exceeding 160 bar

### Application

Double-acting block cylinders with stroke end control are particularly suitable for automated installations, time and cycle-dependent clamping and unclamping.

### Description

The stroke end control supplies the required information about the position of the piston. Control is made by pressure-proof sensors, which are fixed at the corresponding stroke end of the cylinder piston in the body.

### Advantages

- Compact design
- Same dimensions as the block cylinders as per data sheet B 1.5094, except for total length
- Diverse mounting possibilities
- 3 standard stroke lengths
- Sensors can be mounted at the right or left-hand side
- Switching point of the sensors adjustable up to 4 mm before the final position
- All versions are equipped by default with FKM seals

### Important notes!

The high-pressure resistant sensors are installed on customer site, in order to avoid transport damages. Please refer to the installation instructions on page 4.  
 Maximum environmental temperature according to the sensor -25...+80°C or 120°C.

### Version with pipe thread

### Version for manifold mounting with O-ring sealing

### Version for manifold mounting with O-ring sealing bottom side

### Application example

Application for pressing in of piston rods into the pistons.  
 To monitor the press-in depth of the piston rods, the stroke ends of the block cylinder are controlled.

# Technical data

## Dimensions – Versions with pipe thread

## Oil supply and O-ring sealing at:

\* For use of the sensors at the left side, the cylinder will be rotated by 180° and the plug with sealing ring and the O-ring for manifold mounting are exchanged.

## Mounting and setting of the sensors

### Front sensor:

- Extend piston rod completely
- Carefully screw in the sensor to the stop at the piston. Turn back the sensor:
 

Rotation	Switching point before the final position
1/4	approx. 4 mm
1 1/4	approx. 1 mm
- Lock the sensor in this position by means of a nut
- Wire the switch electrically and check the function

LED: Operating voltage (green)  
Function display (yellow)

### Rear sensor:

- Retract completely the piston rod (Further steps see front sensor)
